

SUBSTITUTE SPECIFICATION AND ABSTRACT

Please replace the specification with the substitute specification located at the end of this response. Note that the replacement specification includes proper section headings, as requested by the Examiner. On page 6, line 23 of the substitute specification, a typographical error was corrected, as threaded bore 13 (rather than 13) is included in connecting piece 14, as shown in at least FIG. 1 of the instant disclosure.

The substitute specification includes underlined text indicating insertions, and strikethrough and/or double bracketed text indicating deletions, as required under 37 C.F.R. §1.125. Please note that the substitute specification contains no new matter.
